NVR Media Player is a small piece of software that helps you load and view recordings made with an Airlive NVR capture device and other media files. The interface of the program is minimal and easy to use by any type of person, no matter their previous experience in the IT department. The main window contains all the usual buttons that all media players have such as play, pause, stop, fast forward, a volume level control bar and progress bar. The UI is also highly customizable. The size and color of the text used can be changed, along with the color of the background, which will be able to satisfy any taste. NVR Media Player does not require installation, which means that you can copy it anywhere to your hard drive or to a portable device. By dropping it, for example, to a USB flash drive, you have the possibility of using the application on any computer that you have access to. In addition to that, the tool does not create new entries to the Start menu or update the Windows registry with new keys. The application supports a number of different file formats such as AVI, P4I, H4I, and WMDB. All in all, NVR Media Player is a handy piece of software that helps you load and view recordings made with an NVR capture device or other media files. The interface of the tool is easy to use and customizable, which means that it should fit the preferences of any person.Multimedia Photograph Timothy E. "He claims that he is speaking for Iran, the 5th biggest country in the world, and claims that the article represents [the] position [of] the Iranian government. Yet, he then goes to great lengths to discredit the article's conclusions, and especially its claim that Muhammed Khatami was not a reformist."
