Overview AutoCAD is a commercial CAD application that was originally developed and marketed by Autodesk as a desktop application running on personal computers with internal graphics controllers. AutoCAD is the world's most widely used 2D and 2.5D CAD software application, and it is used by companies, educators, and hobbyists. AutoCAD is part of the Autodesk Suite, which includes AutoCAD LT (a free trial version of AutoCAD), AutoCAD Architecture (for 3D modeling), and AutoCAD Mechanical. AutoCAD is available for Mac OS X and Windows, and it is also available as a mobile and web app for iOS, Android, and Windows phones. You can use AutoCAD to: create technical drawings, architectural drawings, and other complex drawings make annotations, splines, snap to geometry, and draw custom shapes model 3D solids, surfaces, and assemblies create flow diagrams place, rotate, and link objects, including created objects convert and edit drawing data between different file formats create drawing template files draw and import vector and raster images create 3D solids and surfaces create mechanical assemblies and work with them as engineering models capture a drawing, use it as an object in a larger drawing, or export it to another format (PDF, AutoCAD DWG, XREF, or formats supported by other apps within the AutoCAD family) AutoCAD has become the de facto standard for 2D drafting in the U.S. A 2011 survey of the engineering community showed that 95% of engineers use AutoCAD to create 2D drawings, and 59% of those use it to create 3D models.[1] The 2010 report "Autodesk's Annual Architectural Survey" found that 70% of all architectural projects in the U.S. used AutoCAD. The AutoCAD LT version of the software is a trial version that is freeware and cannot be distributed.[3] The free version is known as AutoCAD LT and can be downloaded from Autodesk's website. AutoCAD LT is intended for educational purposes only. It can be used on personal computers without commercial licenses and with limited commercial use. AutoCAD LT is available for Mac OS X, Microsoft Windows, and Linux operating systems. The free version of AutoCAD LT can

It includes a command and function-based scripting language that can be used to access AutoCAD's native objects and functions. Scripting languages AutoLISP is a scripting language, and AutoCAD is capable of running AutoLISP scripts. AutoLISP is implemented in the AutoCAD base language. This feature requires AutoCAD 2010. AutoLISP is called from within AutoCAD by the Command ⇒ Run command. Another language, Visual LISP, is also available as a plugin for AutoCAD. VBA is a Visual Basic macro scripting language that can be used to automate features that are built into AutoCAD. .NET is a macro scripting language with a strong relationship to C#. ObjectARX is a plugin library that can be used to create custom AutoCAD extensions. FVIII has two potential thrombin-cleavage sites, and the heavy chain is cleaved by thrombin at Arg364. We investigated the influence of the cleavage of FVIII on its in vivo and in vitro function. In dogs, both Arg364 and Arg480 were cleaved to FVIII-FV a1d647c40b

The plasma membrane H(+)-ATPase, a P-type ATPase, maintains electrochemical gradients of protons and solutes across the eukaryotic plasma membrane and is required for transport of molecules and energy between intracellular and extracellular compartments. Three recently identified plasma membrane H(+)-ATPases (PM H(+)-ATPase) provide a means to study the mechanism by which this transporter transduces the H(+)-gradient into an electrical signal. A Study of Otologic Disorders in a College Student Population. Objective To determine the prevalence of hearing loss, tinnitus, and otologic symptoms in a university student population. Study Design Prospective, observational study. Setting Private university. Subjects and Methods Sixty-three students who were consecutively enrolled at the university student health center completed questionnaires regarding hearing, tinnitus, and otologic symptoms. We evaluated student demographics, usage of otologic hearing protection, and history of exposure to occupational noise and tobacco use. Results We found that a significant number of students had hearing loss. There were significant differences among males and females in their highest level of education ($P = .001$), with a greater percentage of women graduating with a bachelor of science degree ($P = .001$). Students' average noise exposure was 10 h/week. Otologic symptoms were present in 56% of participants. Otologic symptoms were significantly associated with both tinnitus (odds ratio [OR], 4.32; $P = .006$) and hearing loss (OR, 4.87; $P = .005$). Otologic symptoms were also associated with noise exposure (OR, 1.94; $P = .018$). Student with otologic symptoms had a median of more than 6 years of college and more than 7 hours of noise exposure per week. Conclusion Otologic symptoms are common in this student
