Why Autodesk Wanted a New CAD Program AutoCAD was created at the same time Autodesk was founded in 1982 by three former CAIS engineers, including Kurtzmann, who was the technical director for AutoCAD. Autodesk had been working in the information graphics space for years, but felt that it needed a new application. Autodesk employee Scott Odell explains why Autodesk needed a new CAD program: "The reasoning behind this was that CAD in those days was complex and difficult to learn and operate. If you had to carry your computer around, it was an awkward size. And it was expensive. This was really the era when CAD was being used in the big guys' organizations. There were lots of companies that were using the new Apple Macintosh to build those complex graphics programs. The whole CAD market at that time was dominated by large multi-user applications for the Windows-PC world, for instance." In 1991, an independent group of Autodesk developers working on a commercially available CAD product met and voted to switch the product to a Unix operating system. As a result, a new company, Corel, was formed in 1993 to commercialize the new product. A Timely Product Although the ideas and concepts behind AutoCAD were created in 1981, it wasn't until 1982 that the first public release was made. In 1981, Kurtzmann and his team were working on a prototype, a minicomputer-based CAD application, when one of the engineers at Autodesk realized that desktop CAD software needed to be developed. While the team was impressed with the prototype, they ultimately decided that they wanted a much simpler computer that they
