Not only did AutoCAD change the way architects and engineers worked, it revolutionized the way industries do business. It allowed architects to "see" their designs before they started construction. It created the first virtual prototype of an idea, rather than only providing a 2D drawing of what the architect wanted. It allowed engineers to collaborate on projects across the globe. Technical data AutoCAD enables the end user to enter drawing information into an AutoCAD drawing. This can include drawing, annotation and comments, as well as data, dimensions and relationships. The drawing is stored in a database known as an ADM. The ADM contains objects that define the drawing; a single ADM can contain objects that are stored in different files, such as a set of polylines stored as a single.LWP file. An ADM can contain one or more drawings. A drawing includes annotations, data, dimensions and relationships. An ADM can also include materials, layer, blocks and the instance name. In addition, an ADM contains two type of objects. The 'block' object is a set of geometric or other constraints that describe the components of a drawing, such as layers, block groups, annotations, model space and elevation, grid references and layer settings. The 'instance' object is a set of dimensions, text or other objects that are shared with a drawing and have associated attributes. Instances are automatically created and maintained when a drawing is opened or closed. Document structure A drawing, a page or a section are known as a drawing element. An AutoCAD drawing consists of one or more drawings and is referred to as a drawing set. A drawing set is made up of one or more drawings, and this grouping can be extended to include page, section and drawing elements. Screen space A screen is a two-dimensional image produced on a computer screen. A screen is made up of pixels. A screen space is a subspace of a drawing (a subspace of a section, page or drawing). Within the screen space, the axis parallel to the screen edge and the axis perpendicular to the screen edge are
