1.0.2008: | - First release of CDStart. ----- || Version 1.0.1 ||
===== 3: CDStart
Installation. ----- In the installation you will find an autorun.ini file, whose contents
determine the CDStart functions and setup. When you installed the program, it was made at the same directory as the
autorun.ini, unless you specified another location. If you want to use this file, copy it to the autorun directory. In the
autorun directory, you will find another autorun.ini file, you are free to edit it. To determine the default program to be
started, use the command "fullpath -f autorun.ini" and copy the output in the back to be autorun.ini. If you
```

## What's New In?

\* Easy to use, autorun CD creation application \* Full support for autorun CD's \* Intuitive GUI and skin options \* Audio CDs support \* Language support available \* Multilanguage support available \* File browser to help in the task of creating an autorun CD. \* Small in size, 3.7 Mb (50k mod), very fast executable \* Shows tooltips during the creation of an autorun CD \* Can create multiboot CD's \* OSX based version available: [ \* Windows version available: [ The main advantage is a fact, it's easier to create and produce autorun CD's with CDStart. Installation requirements: \* Zend Framework \* PHP 5.2.1 or newer \* GD Library See screenshots for more detailed description of the features. "CDStart Requirements" - Zend Framework - PHP 5.2.1 or newer - GD Library All programs, components and libraries downloaded with the package "CDStart" are free of charge, but they have been included for your convenience and for testing purposes, so that you will not be required to use them in your application. Installation 1. Create autorun CD in 'Design Mode' 2. Go to the 'Startup Manager' folder 3. Click on any tab 4. Click on the auto run tab 5. Put the address to the application, that you created in 'Design Mode' 6. Click on 'Next'. 7. Click on 'Continue'. 9. Download 'Installer' program from [ 10. Start the installer and let it run. 11. Finish the installer and you are done! See [ for details for usage of the 'Installer' on OSX. MultiBoot If you want to create multiboot CD you have to use the 'MultiBoot' application. It needs to be written in C++ and is not supported on Windows platform. The 'MultiBoot' application is a free application available at [
