Description: In the world of media and tech there are a number of high-end products that are not only prohibitive in price, but also are targeted at users who already own a high-end video editing system. While there are some very expensive products for the top level user, there are also a number of software products that can be considered affordable if you compare them to other products in their category. You will find that most of these products don't require any sort of training or prior technical knowledge or experience in order to use them. The software I am referring to is Primo Video for Windows. Primo Video is a video editing software program that was originally designed as a standard Windows Movie Maker for editing movie clips and images. The program provides video editing functions such as

cutting, trimming, cropping, and rotating video. Other functions include adding text, image effects, and titles to the clip. The program can create simple windows movies, full screen movies and animated gifs. The program also supports high-end features like color matching, special

A Macro is a small set of programmed commands or functions that can be edited and run from within the program. Macro's are similar to batch commands, but Macro's are saved as part of the program. Keymacro is an application designed for the production of animations and video, but with a modular architecture it can be used for many other purposes. Keymacro offers many powerful functions that are divided into 2 categories: Drag and drop and Macro's In the Drag and drop category a user can drag and drop shapes, symbols and entire windows on the preview image, which will then be automatically animated. Examples of drag and drop categories are: - Manipulating the area of objects and moving them around (drag them to the target position). - Deleting parts of an object. - Copying objects and moving them to another window. - Fitting symbols to the shape of the objects. - Displaying the attributes of objects. - Applying effects to objects. - Applying Gradients and Borders to objects. - Saving and loading the created file. In the Macro's category a user can define functions and execute them. Examples of Macro's categories are: - Arithmetic operations (add, subtract, multiply, divide). - Simulating variables (choosing numbers, incrementing, decrementing, outputting). - Retrieving numbers (choosing a number from the text files, outputting a number). - Random numbers (choosing a random number from the text file, outputting a random number). - Generating text files (choosing a text file, outputting the text file). - Playing sound files (choosing the music file, outputting the sound). - Moving files (choosing the file, outputting the file). - Manipulating images (choosing the image, outputting the image). - Adding special effects (choosing the effect and then applying the effect to the selected object). - Saving/Loading the created file. The Macros are part of the Keymacro program, which are stored in an XML file. This XML file is then used by the program to find and run the Macros. The Macros are managed in several categories: - Global Macros. - User Macros. - Template Macros. In the Global Macros section, Macros that are activated by default when running the application can be found. In the User Macros section, Mac

If you are a high-end video processor, then you would know the importance of quality processing for MPEG2 files. While PC systems can manage an average video stream through some basic settings in Windows Media Player, high-end video workstations can often be demanding and require more than the basic tools found in the most popular players. DGMPGDec MPEG2 Decoding Package is a set of software programs that can be used to process MPEG2 movies through its toolkit. Whether you are a novice or a professional, DGMPGDec MPEG2 Decoding Package provides a comprehensive way of converting your files. The goal is to help you process video and audio files in MPEG2 format. This toolkit includes a collection of software programs designed to address a wide range of decoding problems such as audio stream synchronization issues, frame loss problems and video playback issues. While the goal of the toolkit is to enhance the quality of your MPEG2 files, we have also included several video conversion tools that can be used to convert your videos into different formats. If you are an experienced user, you may consider DGMPGDec MPEG2 Decoding Package as the missing link in your multimedia processing solutions. However, if you are new to video processing, DGMPGDec MPEG2 Decoding Package is worth a try because of the variety of useful tools available to enhance your experience. DGMPGDec Functionality: Following are the features that you can expect from DGMPGDec MPEG2 Decoding Package: * Support for MPEG2 video files * Support for audio and subtitle files in PCM, AC3, ATRAC3, IMA and WMA formats * Use of the latest PC audio codecs (AVI, WMA, ASF, MP2, MP3, AAC, OGG, WMA, DTS,...) * Support for Dolby Digital, Dolby Digital 5.1 and Dolby Digital 7.1 * Support for subcode audio layers * Support for DTS, Dolby Digital and Dolby Digital 5.1/7.1 * Support for MPEG video subtitle files * Support for MPEG Subtitle Audio * Conversion of video files into MP4, MOV, AVI, 3GP, WMV, H.264, XVID, Pelvis, RM, RMVB, MKV, FLV, MVC, SRT, TS, WEBM, OGG, AMR and more. *

The WeVideo HD is the most powerful HD video recorder on the market, and it is now available for Mac users. This digital video camera supports 4K/HD (3840 x 2160) resolution and a range of frame rates including 4K, 25p, 24p, 24p 50p, 23.976p, 23.976p 50i, 23.976p 25p, 60i, 30p, 50i, 25p, 24p 60i, 24p 25p and 1080i, in addition to H.264 and MPEG4 H.264. Alongside these HD capabilities, the WeVideo HD has four HDMI outputs (2x HDCP and 2x S/PDIF) and a compact built-in display for status and recording information. WeVideo HD Features: The WeVideo HD is designed to be easy to use and setup, so you can start recording right away with no configuration. The HD resolution is built-in and nothing else is needed to record in HD; you only need to choose the correct frame rates. With WeVideo HD you can easily capture 4K/HD video on a variety of formats, including 4K/HD, H.264 and MPEG4 H.264, and make them look great on your Mac with MPEG4 video filters, Apple Retina display, color space, brightness, gamma, offset and deshine adjustments. The WeVideo HD is also a true H.264 SDI recorder, which is able to record SD resolutions in high quality, including SD, HD, 720p, HD and FHD (1920 x 1080). Also, while recording in 4K/HD, the H.264 SDI recorder records simultaneously in DVCPRO HD and ProRes 422. The WeVideo HD can record at a maximum of 150 Mbps H.264 codec in ultra-high quality for the best high definition video quality. For those who use SD video, the H.264 SDI recorder can record at a maximum of 60 Mbps and 1080i/p up to 80 Mbps. The file size will be compressed to about 50% of the original and the video quality is superb. WeVideo HD also offers H.264 output for the HD video formats, MPEG4 and Apple ProRes, so you can easily export video to your Mac, iPad or iPhone, and even to a GoPro. WeVideo HD supports multiple video formats including 4K/HD, H.264 and MPEG4 H.264, with all the same compression and formats that you need for SD or HD video. The WeVideo HD also offers four HDMI outputs (2x HDCP and 2x S/PDIF) for HD sources, and it can work as a display for a HDMI or component video input. The WeVideo HD also includes a built-in USB hub that lets you connect several types of peripherals, including printers, NAS, cameras
