
Jean Meeus Book Astronomical Algorithms Download 'LINK'

This is a technical book about algorithms for estimating the position of various celestial objects, including the sun and moon. This is a required book for students. Astronomical universities working in the field of applied astronomy. In this book, we will not consider such aspects of astronomy as the methods of astronomical observations and calculations (in this matter, our interests lie in the plane of applied mathematics) and are not even going to consider theoretical issues. In this book, we will consider the practical application of the methods of celestial mechanics, i.e. questions that, as a rule, do not fall into textbooks on astronomy.
