Layer2 SharePoint Business Data List Connector Crack+ Free [Mac/Win]

The connector provides a seamless integration experience between SharePoint lists and external data sources such as SQL Server, MySQL, FileMaker, SAP,.NET, XML, ATOM, RSS, OData, ODB, ODBC, Access, Excel, Active Directory, etc. The connector supports the CRUD for all data types that can be used for storing of sensitive data in a central location. The connector provides the functionality to create, update or delete external data based on the SharePoint list changes. The connector supports connecting with multiple external data sources. The connector is available as a Web Service for easy access and integration with applications. The connector can be used to perform an automatic synchronization between SharePoint list and the external data source. The connector can be configured to work locally or behind the firewall. Layer2 SharePoint Business Data List Connector

Features: Layer2 SharePoint Business Data List Connector supports connections with the following data sources: Connecting to a Data Source: If you connect with a Data Source, it works in a bidirectional way and it is the "list" that will be updated with the information received from the external data source (SQL Server, MySQL, SAP,.NET, XML, ATOM, RSS, OData, ODB, ODBC, Access, Excel, Active Directory, etc.). When configuring the list in SharePoint, the external data source will display its items on the list.

This process is called the "pull" or "pulling" process. Storing sensitive information in a single location: The connector can be used to store sensitive data in a single location. It does not require a complicated configuration, so it is easy to manage. Centralize data: It can be used to centralize data in a single location, in a bidirectional way. Synchronize data from SharePoint: The connector can synchronize the data between SharePoint and its external data source in a bidirectional way. Updating data: The connector can update SharePoint data with the data from the external data source. Creating,

updating or deleting data: The connector can perform the CRUD operations for external data. You can create, update or delete data of any type, not limited to contacts, events, custom lists or tasks. Support multiple data types: The connector supports connections with the following data types: contacts, events, custom lists or tasks. Support for creating, updating and deleting external data in SharePoint: The

Layer2 SharePoint Business Data List Connector Crack+ Free Registration Code

- The OData Service retrieves data from any external data source and allows you to access it.
- It connects to Microsoft SQL Server, Oracle, MySQL, SYBASE, FileMaker, RSS, XML, ATOM, SAP, Microsoft SQL Azure, Microsoft.NET, OData, ODBC, OLEDB, Access, Excel, Windows Server Active Directory and more, without requiring any coding knowledge.
- The connector keeps its connected data up-to-date by refreshing it in background.
- The connection is bidirectional, so users can perform modifications done in SharePoint to the external sources as well, as they are provided with Create-Update-Delete (CRUD) features.
- The connector can be used to store sensitive data in a secure location, and can be used for storing and accessing to it.
- Data can be converted to various data types including contacts, events, custom lists and tasks.
- Data conversion can be performed to data on demand or stored for further use.
- The connector can be accessed through the list views, metadata, etc.
- The connector supports multiple file types. It can be used with mobile devices, etc.

Layer2 SharePoint Business Data List Connector is a connector for SharePoint that makes it possible to connect native lists from SharePoint with various external data sources without using any code and in a bidirectional manner. Users can benefit from all SharePoint's native features for connected lists. Those include views, metadata managing, lookups, searching, mobile access, offline access, workflows and notification changing. It supports connecting to Microsoft SQL Server, Oracle, MySQL, SYBASE, FileMaker, RSS, XML, ATOM, SAP, Microsoft SQL Azure, Microsoft.NET, OData, ODBC, OLEDB, Access, Excel, Windows Server Active Directory and more. Layer2 SharePoint Business Data List Connector can perform connections without requiring complicated configuration, as adjusting its settings can be done directly in the SharePoint list settings. It keeps its connected data up-to-date by refreshing it in background, but can be set to do so on demand, depending on the users' needs. It only transfers data that has been modified. Since the connection is bidirectional, users can perform modifications done in

SharePoint to the external sources as well, as they are provided with Create-Update-Delete (CRUD) features. The connector can be used to store sensitive information by centralizing data 09e8f5149f

Layer2 SharePoint Business Data List Connector Free

- Powerful to move data across SharePoint lists, databases and other external data sources - Reliable to keep data up-to-date - Configurable for various scenarios - Easy to use - Bidirectional for easy integrations
