MTPuTTY (multi PuTTY)

MTPuTTY, the multi-tabbed PuTTY, was written to make PuTTY or PuTTY-like programs easier to use, by providing a tabbed version of it. As opposed to the one or multiple PuTTY windows, you get one or multiple PuTTY tabs. When you run MTPuTTY, it will automatically create as many tabs as there are PuTTY instances you have open. For instance, if you have two PuTTY instances open on two different servers, you will get two tabs, one for each server. Each PuTTY tab contains all the PuTTY instances you have open, for instance the public and private ports. The installation of MTPuTTY was fairly simple, because it is very easy to use. After you download it, simply open the file and double click on it to run it. The installation wizard will help you through the whole process, simply follow the instructions. After the installation, you will be asked to select your preferences. MTPuTTY will look for PuTTY on your computer at the given path. You should get an error message if that does not work. Simply run PuTTY from your Windows start menu and select the option to "Run as administrator". This will install the latest version of PuTTY, but if you have already installed the newest version, you should get a message to update PuTTY. After that, you will be able to select the tabs and the tabs will be added. After you have selected the tabs, you can open as many PuTTY instances you want to, simply right click on the newly created tabs and select "Open in new tab" to open PuTTY and connect to a server. You can also open PuTTY directly from MTPuTTY, but it requires you to click on the "Open in new tab" button. TICKTRAY Description: TICKTRAY is a free and open-source toaster tray application for Windows that allows you to display (in your system tray) a native Windows application. You can choose which application to display and also display the application icon in the system tray. The system tray is a location in your system that holds notification icons for messages, new emails, missed calls, etc. When you are using your computer, you can keep your system tray display to a minimum to avoid interrupting your work.
