Photoshop is referred to as "photoshop" because Photoshop is created to manipulate images just as a photographer uses a camera. Your camera will likely contain image-editing software as well, but your camera will have more functions like autofocus, flash settings, and white balance. Adobe Photoshop will also tell you what settings were used when you save your image so you can edit the image later to get the look you originally had in mind. Like many software programs, Photoshop has a workgroup of users that offer different tutorials, and you can buy specific tutorials or even a complete book about a single subject. Many other resources are available for learning Photoshop, including several books dedicated to teaching you how to use Photoshop and also books and websites about the subject. Photoshop is the only image-editing program I cover in this book. That said, if you want to change your perspective on images, Photoshop is worth checking out, either for yourself or for a beginner. Photoshop offers a large number of features and functions. Read on for a look at some of the most important ones.

Choosing a destination If you're creating a single image, you most likely don't need to worry about any special destination that you can choose for your image. But if you're creating multiple images that you want to keep or share, you do need to decide where they're going. You can choose from a variety of folders to save your images to. In the New Document dialog box shown in Figure 2-2, you can select a folder from the Destination drop-down list box. Depending on your computer system, you may see several directories and folders on the workspace (like the Windows Desktop). The first time you open a new Photoshop

Q: Inserting audio files into a database I'm trying to insert a bunch of audio files into a database table. This is how my table is set up: CREATE TABLE IF NOT EXISTS `audio` (`id` int(11) NOT NULL, `file_path` varchar(255) NOT NULL, `mime_type` varchar(100) NOT NULL, `type` int(11) NOT NULL, `remote_path` varchar(255) NOT NULL, PRIMARY KEY (`id`)) ENGINE=InnoDB DEFAULT CHARSET=latin1; I have a for loop reading files from a directory, and that is when the problem begins. The problem is that with each iteration of the for loop, a new entry is created. At the end of the loop, the table is full of the same information for all files. for(\$i = 0; \$i < \$total; \$i++) { \$filePath = \$_FILES['audio']['tmp_name'][\$i]; \$audio->setMimeType(\$_FILES['audio']['type'][\$i]); \$audio->setType(\$_FILES['audio']['type'][\$i]); \$audio->setRemotePath(\$_FILES['audio']['tmp_name'][\$i]); \$audio->insert(); } This is the code I'm using to insert. A: You want to set \$audio->insert() just once, outside of the loop. That way each time the loop runs \$audio will be a fresh instance of the Audio class, and \$audio->insert() will be called on that instance. The efficacy of using the triple balloon enteroscopy (TBE) to treat patients with symptomatic Crohn's disease (CD) has not been prospectively evaluated. We compared the results of enteroscopy findings, need for medical therapy, hospital stay, and complications in patients with CD seen at our institution over a 6-year period using TBE versus an enteroscopy performed with standard double-balloon enteroscopy. A total of 53 patients with CD underwent enteroscopy in our institution with a TBE procedure (TBE group), and 461 patients underwent enteroscopy using the double-balloon enteroscopy (DBE) procedure (DBE group) over the same 6-year period. Of the 485 enteroscopies performed in the TBE group, a total of 234 (48%) were performed for therapeutic indications, and 241 (52%) were performed for diagnostic purposes. The numbers of patients who underwent oral and rectal biopsies and capillary pattern biopsies were significantly higher in the TBE group than in the DBE group, 37% vs 10% (P < .001).
