Shalom Help Maker is a free Windows help file builder that provides all the necessary tools to create a comprehensive help manual. You may find the interface a bit overwhelming at the first look and one thing is pretty clear: this is far from being a well-organized interface, but it serves its purpose

and still helps the program get the job done. Besides the fact that it doesn't need a standalone word processor, Shalom Help Maker offers all the tools you need when creating help files, including links, images, popup windows, highlighting and many formatting options such as colors, layout and alignment. Obviously, a search tool is also there to make sure you can find a page with ease, but Shalom Help Maker also boasts a content and index utility to help you keep track of the files. Plus, you need to fill in a keyword text box on every single page, which also lends you a hand when trying to find a specific page. The “Tools” menu holds lots of features, including the possibility to insert various components, such as popup links, targets, jump to a target or to another page, images, bullets, boxes or execute macros.

Additionally, the app sports a dedicated keyword editor and a page organizer, but also a preview utility to see your content as you update a page. The footprint on hardware resources is really minimal and Shalom Help Maker works without a flaw on every single Windows workstation out there. Which leads us to a rather simple conclusion: with a few updates, including an interface redesign, Shalom Help Maker could become one of the top products in this particular software category. It has a lot of great features, that's for sure. [Shalom Help Maker User Reviews](#)

One of the best games currently available on iOS devices is BadLand, a platformer that gives players a fun, quirky experience complete with a storyline, unique gameplay, and top-notch graphics. But it seems as though developer Scepter Games wants to make the game even better, as they just announced plans for BadLand to be released on Windows 10. BadLand is already available for both iOS and Android, but starting September 15th, Windows 10 mobile users will finally be able

to jump into the game's world. First and foremost, BadLand on Windows 10 will include the same game as its mobile counterparts. Along with the standard gameplay, players will also be able to unlock additional costumes for their character as well as an array of bonus modes, including Arcade mode and more. When it comes to graphics, BadLand has already gotten a few upgrades, including the ability to display multiple frames of animation for an increased sense of speed.
