NOTE: After installation you need to install Autodesk's decryption application. This is very easy to do (just search for "Acad", it's a free application) The key is downloaded in the "Apps" menu at the bottom of the program window. It's easy to find because it's the one with "CreatePadMD.exe" in the name. 1)In the import file there will be a folder called "keys" That folder is where all the decrypted files are. There are some sub-folders inside of it. You will need to download the gdi2, viewdxf, and decrypter. 2)You'll need a working decrypter program. The decrypter that comes with AutoCAD is apparently not a valid one. I found one online that worked great. This is what you use to decrypt the files (only the dxf file, gdi2 and viewdxf are needed): 3)There are several files in each of the folders in the key "keys" folder. Here are a few pictures of what the key looks like. The decryption key goes in one file, the decrypter in another. The file name of the decrypter file is the name of the file that will be saved in AutoCAD. The file name of the decryption key is always the same name, but with an.md extension. So the first file saved into AutoCAD will be called "Decrypt-Microsoft3DV14.md". The name of the decrypter file is "CreatePadMD.exe". You can also rename this file and change the name to "ACMD" or "CAD" (or anything you want) 4)Now when the file is finished exporting (you can save as png, or tiff, or svg, or you can just save it as is) You will need to import it to AutoCAD. In AutoCAD 2012 you will use the "Automation" menu at the bottom of the program window. In AutoCAD 2010, you will use the "File" menu at the top of the program window, and use "Import" as the command. When you import it, you will see a
