Quick Quote Crack+ Full Product Key

Quick Quote is a simple and easy-to-use piece of software that allows you to store quotes and easily find them. You can find all your quotes by searching for things like names, dates, events or anything else you tag when entering your quote. Quick Quote is simple but powerful. All of your quotes are stored on one central database and you can always access any of them with a tap of the screen. It is so easy and so convenient to use that even your grandmother would be able to use it. You can find and display (i) all of your quotes, (ii) all of your quotes concerning one person or (iii) all of your quotes concerning a certain event or a range of dates, and all of them in a fast, easy and convenient way. If you have quotes all over the place you can even (iv) filter the quotes by typing anything into the search box, like a persons last name or a keyword, and the program will search all of your quotes and display them in one convenient list. Just start typing and the program will find them all. Quote Tags: First up you must tag your quotes. Every quote must be tagged by either a person or an event or any other thing that you want to find. The tags can be anything. Personal tags include names, events, contacts and keywords. Event tags include names, dates and keywords. And date tags include names, dates and keywords. It doesn't have to be just one tag. You can tag your quotes with more than one tag. For instance you can have tags for a person, an event and a date. Sample Tags: A sample tag for a person could be: *"Dick and Jane"* A sample tag for an event could be: *"Flying Disco"* A sample tag for a date could be: *"Mom's 70th Birthday"* Forget the tags, just remember you want to tag your quotes with something that will help you easily find your quotes if you ever need them again. The tags should come before the quote itself. If you want to add some tags to a quote it is very simple. Just open the quote and add a comment to it. If you want to edit the tags in a quote you can do it in the same way you'd edit any other comment. It's that easy. No complex settings. Because Quick Quote is easy to use, there is no
