AutoCAD LT allows users to develop applications in Visual LISP, Visual Basic, and Visual C++, though development in the latter may be limited. The company also offers AutoCAD LT design-time add-ons (DDXs) for development in Visual C++ and Visual Basic. In Visual LISP, the programmer can use the AutoLISP

programming language to access any aspect of AutoCAD LT. Users can extend AutoCAD with plugins (add-on programs) and DDXs. This is done by creating plug-ins or DDXs that offer new functions and create new menus or command bars. There are currently over 3500 plug-ins available in AutoCAD; the most recent one was released in January 2017. However, plug-ins that offer new functionality usually have to be activated by the AutoCAD Administrator. When

AutoCAD LT came out in 2001, the company offered a service called the "AutoCAD LT Connected Application Environment" (ACCE), allowing third-party developers to create autoCAD applications. However, this service was discontinued in 2007. The Autodesk Exchange Apps are downloadable from the company's Appstore and include a free trial version of Autodesk Inventor, Autodesk Inventor Mechanical, Autodesk Navisworks, Autodesk

AutoCAD LT, Autodesk AutoCAD Standard and Autodesk AutoCAD Architecture. In April 2019 Autodesk announced the discontinuation of the Autodesk Inventor Mechanical and Navisworks applications with the AutoCAD LT Connected Application Environment and some Autodesk Exchange Apps applications. This is part of a plan to discontinue applications that are no longer in active development. In 2016 Autodesk released AutoCAD Webapps, a cloud-

based CAD platform that allows users to use their web browser to build and run CAD applications. Autodesk Exchange Apps continue to be available on the AutoCAD Appstore.
