A: It is possible that the software version you are trying to use is not valid for your machine. To validate the serial number, enter the SET > License Manager > License Server. In the Software Version box, enter the version number. In the Current Version box, enter the one that you are trying to use. If the two version numbers do not match, you will get a box on the right that says You have an out-of-date license. Install the version used by your current version. To install, follow the instructions on that box. A: I have the same problem after upgrade from 15.0 to 16.0 and then to 17.0. I run this command in the command prompt to check your version: C:\Program Files (x86)\ABBYY\FineReader\cs Verbose mode=1 Verbose mode=1 product=FineReader PDF software productVersion=16.0.0.15207 The output of cs command seems to be a serial number rather than a the installation number I seek. I guess the latest version (17.0) seems to contain a newer serial number. Then I download the latest version from ABBYY (17.0) from the website and my installation is successful. Maybe it will work if you download the latest version from the website or from your original license manager. 1. Field of the Invention The present invention relates to a method for forming memory cells. 2. Description of the Related Art Conventional flash memory cells have employed floating-gate MOS transistors. In these MOS transistors, a high voltage of, for example, 12 V is required for injection of charges into the floating gate. If a low voltage of, for example, 5 V is applied to the control gate of the MOS transistor to read a data from the floating gate, no current flows from the drain to the source because, at this low voltage, the MOS transistor does not conduct. Therefore, if a cell of the conventional type is employed to form an electrically erasable and programmable nonvolatile memory, a high voltage of 12 V is applied to the source and drain regions during the writing operation and the erasing operation. 1cb139a0ed
