NetShareWatcher Crack Full Version Free Download

NetShareWatcher lets you monitor network shares and their associated permissions, so you can quickly identify any unauthorized changes to permissions, group memberships, or permission entries. NetShareWatcher also performs periodic checks of the current permissions for all the shares, checking for changes to share permissions. If a change is detected,

NetShareWatcher notifies you, and makes it simple for you to resolve the issue. NetShareWatcher includes a built-in troubleshooting utility that checks the ACL permissions for all the shares on the network. You can select a share by clicking the selected share, then NetShareWatcher will display the details and permissions for that share and attempt to identify whether there are any entries that need to be reviewed. NetShareWatcher allows you to customize a list of users or groups that you specify. You can then configure NetShareWatcher to automatically revoke permissions for any user or group from a list of your choosing. As a result, the only authorized access to a share is from the list of users or groups you have approved.

NetShareWatcher Features: - Dynamic monitoring: NetShareWatcher updates the list of network shares and access permissions for each share on the network each time it is run. It will also notify you any time it encounters a share with any unauthorized changes. - Fast. Built-in multi-threaded database for checking share ACL permissions. - Flexible. NetShareWatcher allows you to configure different alerts, and you can customize the types of data to be sent to the server. - User friendly. Our built-in troubleshooting utility guides you through the process of checking share ACL permissions for a specified share, with NetShareWatcher displaying any problems it discovers and offering suggestions on what to do. - Easy to install and use. There is nothing to install, just download and run. FotoSnapApp Description: "FotoSnapApp is a useful software to take and share photos and video that you want to keep, it's a memory-keeper for you. FotoSnapApp is a free software to take and share photos and videos that you want to keep, and easily save your memorable moments. FotoSnapApp works on Windows XP, Windows 7,

NetShareWatcher

NetShareWatcher is an alert application for Network Administrators to monitor network shares and identify network shares that violate data access policy. Usage: NetShareWatcher configuration settings will be located in the following file location: %APPDATA%\NetShareWatcher\NetShareWatcher.ini You may open and edit this file with notepad (notepad will create it for you if it does not exist). Below you will find complete list of all options: [General] Hostname: Specifies hostname NetShareWatcher should use for accessing the server. Default value: netsharewatcher.local ServerPort: Specifies port NetShareWatcher should use to communicate with it. Default value: 1089 ErrorLog: Specifies name of log file NetShareWatcher should write all errors to. Default value: C:\DebugLogs\NetShareWatcher\ ClearConnection: Specifies whether NetShareWatcher should clear each connection (i.e. NetShareWatcher will not use the connection to detect new shares when setting up NetShareWatcher). Default value: No ConnectionTimeout: Specifies connection timeout for NetShareWatcher server. Default value: 10 CommunicationTimeout: Specifies communication timeout for NetShareWatcher server. Default value: 5000 Triggers: Specifies when NetShareWatcher will send the alert notification to user. Default value: Whenever a new shared folder is detected or Whenever a specific share is detected. Extras: Specifies additional action which will be performed after alert notification. Default value: AOPrivate.aop DefaultGroup: Specifies name of the default group for alerts. Default value: [Accounts] AccountsList: Specifies list of accounts used to make logon for NetShareWatcher. Default value: DefaultAccountsList: Specifies list of accounts used to

What's New In NetShareWatcher?

NetShareWatcher is an network security improvement software allowing network administrators to easily monitor network shares and identify shares which are violating data access policy in their organization. NetShareWatcher is very handy. You could configure it once and forget about network sharing problem. You need just select restricted groups or users and every time when NetShareWatcher will find network share with access list containing that restricted users it will take an action, which is also configurable. NetShareWatcher allows you to easily monitor network shared folders and permissions. NetShareWatcher alerts anytime an user sets a share ACL to "Everyone" or some other global group that violates your data access policy as well as disable this shared folders automatically if you have selected appropriate feature in the settings. NetShareWatcher has user friendly interface and is easy to use. Being configured once, it will regularly notify you on network sharing detection with restricted permissions assigned.
