
MP3GAIN PRO 107 WITH KEY.382

. This page was last edited on 12 17. This is a disabled permalink. Go to .Q: Display app (not a script) in a docker container I have a docker image containing the following container. I want to be able to display some javascript in the webpage when I build my docker image. How can I do that? FROM openjdk:8u232-jdk MAINTAINER lab.apache.org ENV PATH /app/java/latest:\$PATH COPY docs/ /app/ WORKDIR /app RUN sudo apt-get -y update RUN apt-get -y install zip unzip bzip2 ENTRYPOINT ["/app/java/latest/bin/java", "-server", "-Dcargo.compilerArgs=-jar", "cargo.toml"] A: Best way to do this is to just create an interactive container FROM openjdk:8u232-jdk MAINTAINER lab.apache.org ENV PATH /app/java/latest:\$PATH COPY docs/ /app/ WORKDIR /app RUN sudo apt-get -y update RUN apt-get -y install zip unzip bzip2 ENTRYPOINT ["/app/java/latest/bin/java", "-server", "-Dcargo.compilerArgs=-jar", "cargo.toml"] ADD yourjs.js /tmp/yourjs.js ENTRYPOINT ["/bin/bash", "-c"] CMD ["cat /tmp/yourjs.js | /bin/bash"] Just change yourjs.js to contain whatever code you want. This method lets you display your code on stdout, and if you want to see the result of that on the browser, just open a terminal and run cat /tmp/yourjs.js | /bin/bash. If you want to embed, put it in the dockerfile instead of /tmp/yourjs.js If you want to just display the message, not interpret it, this should work: ARG message COPY yourjs.js /tmp/yourjs.js ENTRYPOINT ["/app/java/latest/bin/java", "-server", "-Dcargo.comp
