----- Download the included archive and unzip to install. It contains the most important application files, you can start the program from the startmenu. The AudioWave program is designed to reduce the ambient sound into a comfortable LF-signal-generator, which produces sine and noise signals. It produces signals from 1Hz to 20 kHz with a resolution of 1 Hz. The generated sound can be used to stimulate the blood circulation, the nerves and the parasympathic and sympathetic nerves. A user manual is available, as well as an internet document for first uses. Generate a simple sine wave from 1 Hz to 20 kHz with a resolution of 1 Hz. The sine wave can be used to stimulate the blood circulation, nerves and the parasympathic and sympathetic nerves. AudioWave application turns the soundcard into a comfortable LF-signal-generator, which produces signals from 1 Hz up to 20 kHz with a resolution of 1 Hz. Phase shift between left and right channel is adjustable from  $-180^\circ$  to  $+180^\circ$  and an attenuator can be used for steps of 0dB, -3dB, -6dB, -10 dB, -20 dB, -30dB. Frequency, level and attenuation can be adjusted independently for left and right channel and optionally left and right channel can be chained. Automatic frequency and level progress is programmable. Complex adjustment can be stored as presets with clear names. Features: \*\*\* 23 kHz \*\*\* AudioWave can produce signals from 0.9 Hz to 23 kHz with a resolution of 1 Hz. AudioWave is a special signal generator for audio applications. It works on soundcards and analog inputs. By using the analog volume control and adjusting the balance of the left and right channels a LF-signal generator can be created. Furthermore an attenuator and a phase shift between channels can be set to compensate for an imbalance of LF-signal-generators. A -switch that can be turned on and off (signals can be turned off too) B -audio volume control for analog-signals C -frequency select (1Hz to 20kHz) D -attenuator E -phase-shifting  $-180^\circ$  to  $+180^\circ$  F -balance between left and right channel G -LFO (0.1Hz to 1kHz, continuous, controlled by the LFO-button) H -LFO (0.1Hz to 1kHz, continuous, controlled by the LFO-button) I -LFO (1Hz to 20kHz, 10 steps, controlled by the LFO-button) Left channel chain, all settings at same time Left channel channel X to channel (X+4) Left channel channel X to 1 (0.5Hz to 5kHz) Left channel channel X to 2 (1Hz to 10kHz) Left channel channel X to 3 (2Hz to 20kHz) Left channel channel X to 4 (3Hz to 30kHz) Right channel chain, all settings at same time Right channel channel (X+4) to (X+2) Right channel channel (X+2) to 1 (0.5Hz to 5kHz) Right channel channel (X+2) to 2 (1Hz to 10kHz) Right channel channel (X+2) to 3 (2Hz to 20kHz) Right channel channel (X+2) to 4 (3Hz to 30kHz) Left channel: X+2, "left channel" Left channel: X+4, "left channel" Left channel frequency from 0.5Hz to 10kHz Left channel frequency modulated by a LFO (0.1Hz to 1kHz) Left channel attenuator from  $-6\text{dB}$  to  $+6\text{dB}$  (0dB) Left channel frequency with attenuation Left channel attenuator with frequency Left channel phase shift from  $-180^\circ$  to  $+180^\circ$  Left channel frequency with phase shift Left channel attenuator

Multi channel SF2 PCM recorder for recording F#/Gb/Ab/Db

AudioWave 2 can be used as a simple loop recorder or as a multi channel analog to digital converter. The original signal is recorded on each channel without any processing into the PCM-file. Each channel can be programmed separately. This way, the recording of left and right channel can be done at different times. Left and right channel are recorded with an attenuation of -3, -6, -10 or -20dB and can be chained. Left and right channel can be programmed as independent or chained and can be masked. This allows to record all channels separately and mask certain channels. The recording is stored with a resolution of 1kHz, 16-bit, sample rate 44100Hz. AudioWave recorders are not the only way to record music! AudioWave 2 offers an interface for easy access to the PCM-recorder and is basically a keyboard-controlled synth. Each channel features an input, an LFO modulation input, an envelope input and an output. The “previously recorded” input allows the user to cycle through the recorded values. This way the user can select the most suitable part of the signal for recording. Each channel has its own ADSR envelope input and output with a LFO frequency of 1.1 Hz to 15 Hz. The envelope input can also be used to program a LFO in LFO mode. The LFO input of channel 1 can be connected to the LFO output of channel 2, resulting in a polyphonic LFO with waveform-pairing. The envelope input of channel 1 allows to program the envelope’s attack time as well as the exponential decay. The same also applies for the frequency of the LFO (frequency modulation). The frequency modulation can be connected to the LFO input of channel 2. The modulus of the envelope can be set separately for left and right channel or chained together. The LPF envelope input allows to filter the signal for a given band. This can be done for the left and right channel independently or chained together. The envelope input can be routed to the RCA outputs, the S/PDIF or MIDI output. The audio output is routed to the RCA output or the headphone jack. AudioWave 2 offers a

## System Requirements:

Minimum: Requires an Xbox One Console with 4GB or more of RAM  
Supports Windows 8.1 or later Requires 1,920 MB of free space on the internal hard drive  
Supported Add-Ons and Accessories: Requires Xbox One Wireless Controller  
Wired Xbox 360 Controller – Not supported in this mode  
Xbox 360 Wireless Controller – Not supported in this mode  
Vive – Not supported in this mode  
DirectX 12 graphics  
Screen resolution – 1920 x 1080  
Video output – HDMI 1.4
