When BIM (Building Information Modeling) was introduced in early 2006, features were added to render some 2D features into 3D objects in real time. This version, initially known as X3D, was also used for 3D solid modeling in AutoCAD, as well as a CAD data interchange format. The first version of AutoCAD to use BIM was 2016. The current version is 2016.3. This software can automatically create and render BIM models and animations to present to non-BIM-savvy architects and engineers. These tools help architects and engineers create, view, and edit BIM models. In June 2017, the release of AutoCAD 2020 brought a new productivity suite with design-centric features, including a new 3D engine for creating and rendering building models, cloud-based collaboration features, performance improvements and enhanced video editing capabilities. A completely new interface replaces the

2010 user interface (UI), and other new features include: an intuitive, modern UI with Material Design support for device-agnostic design experiences multi-tasking features to enhance productivity new BIM and motion planning tools an in-built video editor for simple editing and creation of industry-standard video AutoCAD has always been sold in a single edition, although there have been different features and levels of functionality included in each. In earlier versions, the first full release was called Release 30, so the first feature in that release was called 30.1. AutoCAD 2017 is version 2.0. AutoCAD 2010 added the ability to automatically split wall and roof trusses, based on the specified detail levels of the wall and roof for the component being drawn, using the AutoDesks feature. These new features added to the ability to automatically convert drawing layers to region objects. AutoCAD 2010 was also the first release to support the use of Wacom technology to create images of drawings. AutoCAD 2010 was released on October 15, 2009.
