It was incorporated in 1854 by the merger of the Huddersfield, Queensbury and Bradford Railway (HQ&BR) and the Liverpool and Preston Junction Railway. The two companies had been constructed to connect their respective centres of operations, and the Huddersfield-based company had located stations at Huddersfield and Queensbury, north of Leeds, but the L&PJR was only a short line between Huddersfield and Liverpool, and the HQ&BR was only in length. Both lines were single track. In the decades leading up to its absorption by the L&BR, the Huddersfield, Avondale and Wigan Railway had a major influence on the development of British railway construction methods. It built large, lightly constructed viaducts, laying a new and cheaper method of construction at the time, and worked by a staff of railwaymen mostly drawn from the ranks of navvies in England. Most of the viaducts on the HQ&BR line were built on this new and cheaper method, and they remained in use until the turn of the 20th century, when the company had been absorbed into the London and North Eastern Railway. The Huddersfield, Avondale and Wigan Railway was absorbed by the London and North Eastern Railway (LNER) in 1899, and closed to passengers in 1952 and freight in 1966. Origins In 1848, the Liverpool
