Leawo.Q: SQL Order by descending count of a column I have a SQL query which selects all orders placed by a user and am trying to get a descending order by the count of the type column: `SELECT * FROM `order` WHERE `userID` = '500' ORDER BY `orderCount` DESC` This works as expected with the type of order as long as the table is large. However once the tables gets to around a million entries I get a MySQL error: Out of memory (Needed 10452332 bytes) The orderCount column is an integer. The size of the table is 107,000,000 rows. Is there any solution to this? It's an easier way to write this order by type descending into a sub query or am I only able to do this if I skip the order

by ordering per row and selecting the top one. A: I think you need to create a temporary table using SELECT DISTINCT orderCount, instead of ORDER BY orderCount DESC. You then join on this temporary table. CREATE TEMPORARY TABLE orderCounts (orderCount INTEGER UNSIGNED, userID INT UNSIGNED, PRIMARY KEY (orderCount, userID)); INSERT INTO orderCounts SELECT DISTINCT orderCount, userID FROM yourTable; SELECT * FROM yourTable INNER JOIN 648931e174

The role of alcohol use in the etiopathogenesis of atrial fibrillation (AF) is not well established. The aim of this study was to evaluate the independent effect of alcohol consumption on stroke in patients with non-valvular AF. Patient and procedural data from the German Registry on Arrhythmia Risk factors, 3 (MARF 3) were analyzed. The influence of alcohol use was assessed using cox proportional hazards models with adjustment for established risk factors and/or the indication for anticoagulation. Among 11,788 patients, the percentage of patients with AF and alcohol abuse was 4.6% (n = 528), moderate alcohol intake 15.6% (n = 1766), and no alcohol use 79.7% (n =

9018). Alcohol users had a lower risk of AF recurrence after ablation and improved sinus rhythm (SR) maintenance (P
