"In FIFA 20 we made a big step forward with respect to animations, passing, and dribbling. But we still have a long way to go," said Karl-Magnus Troedsson, game director of FIFA Ultimate Team. "The depth of gameplay in FIFA is like no other sports game. I think this is reflected in the deeper technical work that has gone into FIFA 22 - it is truly the deepest and most authentic gameplay experience in the franchise." Read on for a detailed overview of FIFA 22's gameplay enhancements, including key changes to: Passing and Dribbling New dribbling and shooting mechanics Advanced contextual ball physics In game motions and facial animations Rebalanced dribbling and pass accuracy for new and returning club legends Updated coaching behaviours Goalkeepers Player Awareness Motion capture technology Key changes to Pass and Dribbling Key new gameplay elements to pass and dribbling Control New dribbling controls: Press the left thumbstick to perform controlled outside-of-foot moves Press the right thumbstick to perform controlled inside-of-foot moves Press the left and right triggers to perform controlled mid- or long-range moves Quick Dribbling: Press the left thumbstick down and hold to perform short, quick steps while dribbling. This allows you to quickly change direction and go around defenders or manoeuvre to open space to deliver on-the-run passes. New Shooting Mechanics and Player Beliefs: Shot Accuracy and Shooting Power: Shot Accuracy is a new visual indicator of how well a shot will go. The more the shot deviates from the target the less accurate it will go. It is affected by the angle of the shot, and whether the player moves towards or away from the target, as well as the distance to the target. New Shooting Beliefs: Shots are now more believable in-game. Players have a new 'Self-Belief' gauge that affects their ability to score. When the player has a full self-belief gauge they can confidently shoot from any angle, even when they don't have a clear view of the target. New Shaking Beliefs: Shots will now shake, mimicking the actual behaviour of the ball in the air. \* FIXES: Gameplay: Passing Improvements and Changes:

In a game all about scoring and passing, you need to know who to pass the ball to and who to shoot on. In FIFA, you'll receive six cards, each with their own responsibilities, each with its own stats and its own interaction with the other players and the pitch. Pitch: In FIFA, the pitch will be like a garden. There are bushes, trees, but also some special touchline markers on the pitch that you need to aim for. This is where you can't pass the ball, but also where you can't defend from. If you're player tries to shoot on a marker, a defender will appear and the player will be marked. You are checked for a foul if the goal line is crossed, but the ball can't be moved by the referee's whistle. Create a Ball: You can kick a ball from anywhere in the garden by pressing down on the Circle Pad. Field of Play: The grass will grow between some parts of the pitch, and some parts won't. Both these parts are extra difficult to control the ball on. Fouls Fouls are a big part of the game. They take place when players are near the other's touchline or the goal line. If a player bumps another player, he will lose the ball, but that player will take a yellow card. If the other player plays without bc9d6d6daa

FIFA 20 also has "Locked Time Round", which will give players five (5) minutes to attempt to unlock the next round of the World Cup, with a similar effect to the FA Cup. For example, if your team wins the first match of the World Cup in Brazil, you have five (5) minutes to unlock the next match of the World Cup. You can only unlock the match that will immediately follow your match (i.e. the next match on the pitch), so if you lose the first match, you will not unlock the second match of the day.
