"Symphony: A Shadow in Lunaria is a hybrid of exploration-heavy roguelike and dungeon crawling." 69/100 – Indie Journal About The Project: A new magical girl story full of depth and excitement, that blends the gameplay of the original Kakegurui series with the drama and darkly humorous themes of the original Yumekui Merry. Symphony: Music's Masterpiece and Phantasy's Dream "This was a spectacular mix of a musical experience. A great deal of thought has been put into Symphony, and the end result is something special." Over 70 Kudos from reviewers SYMPHONY: A SHADOW IN LUNARIA Symphony: a Shadow in Lunaria is an RPG-Shmup hybrid in the classical RPG and bullet-hell genres. Your choices will completely alter the way the story unfolds and determine what kind of ending you will have. The simple story is told through carefully designed levels, where you start out as a student and have to find your way through the complicated events of the Luna Flower Festa. A story full of twists and turns, and a humorous tale about first-time love and high-school politics. Chapter 1: The background story Written as a novel, Symphony: A Shadow in Lunaria has a story that was initially

created as a prequel to the original Kakegurui series. Symphony was initially conceived as a side-story, but we ended up finishing it much sooner than we anticipated. As a result, it became more of a main-character story. We initially tried to fit as much about Yuri in Symphony as we could, with the intention of making a sequel to her story in the future. Yuri needs to follow the Moon's orders and return everything that she stole to his/her perfect world, so she's spending the next few months studying hard in Luna. But she's also dealing with the fact that her feelings for Makoto and his school have grown. After a series of events she's about to reveal that might have consequences for the future… or not. All she knows for sure is that she wants to be with him, but she doesn't know where to start. The story takes place over the course of a single school festival, as the main character Yuri struggles through her high school life. Chapter 2

Rabbit Simulator is a 2014 and 2015 puzzle video game developed by Ernesto Cervantes and released on November 12, 2014 and by Eagle Egrets, Inc. for Microsoft Windows, with follow-ups; a mobile game for iOS and Android in 2015, and an on-line game for 2015. The player's task is to make the rabbit run safely around the levels. Directional controls include rotating the cursor with the mouse and left and right-clicking to navigate a menu. Some configurations of the game can be mixed and used as needed, such as for alternating between directional controls or for switching between the 3D and 2D environments. There are no traditional obstacles and the goal is made available before the game starts. The game uses a patented particle physics system, a procedural damage system, and procedural terrain. It also includes what came to be known as the "Death Gap" mechanism, the goal being that the game ends when the rabbit inevitably falls into the bottomless pit, never to be seen again. Plot The rabbit (the only living character) runs around a neighborhood and other cities on a map. Information on this map includes: buildings, the number of residents, and (the non-zero) time. The story of the rabbit (i.e., the player) concerns how the rabbit chose to adventure. The rabbit created a "multiverse" - a new world in which he became chief. In this world, he set up a government (the "Elite Supreme Factotum Cadre") and instructed it on driving the rabbit's government (the "Gelidous self-reducing monarchocratocracy of the People, against all other governments on Earth") to its end. Also, he created a "death gap" so that there would always be an ultimate enemy for the people to fight. The rabbit, who owns everything, orders his soldiers to kill people, to keep them from knowing that they do not own anything. The soldiers obey. The rabbit is usually happy when he sees the people suffer and is not often seen crying. A small helping smile that he gets when things go well looks more like an evil grin. The player controls the rabbit. Gameplay The task is to navigate the neighborhood, which includes a maze, around a map using the controls. Obstacles include bullets, asteroids, arrows, or being hit by another rabbit. There are four goals, ranked in importance from 1 to 4:
