

Notice that the third line begins with three slashes. Those three slashes indicate that the rest of the string should be discarded. To add this feature in Google, we need to use a regular expression. To do this, we need to quote the regular expression so that the shell doesn't interpret it and tries to execute the regular expression. To add this quote, we need to make sure that we're in single quotes. To tell the shell that it's a single quote, we need to escape the quote with a backslash. As a result, the shell expects one of the following two options: The regular expression looks for this kind of string, called a line end. It should only occur once, on the last line of the input. To indicate that the regular expression needs to look for this kind

of text, it should be preceded by a caret (^). We can put a string of regex expressions in a single line by using a backslash before the caret. These two pieces of the line are combined to make the line that the Shell will recognize as a single regular expression.

When we're done, the three slashes are replaced with a single slash, and the string is what's left. The line looks like this: '^.*line end.*\$' One of the biggest problems with regular expressions is that they are hard to read. They tend to be hard to follow because there are usually more of them than there are matches to them. Fortunately, regular expressions have an alternative syntax that helps with this problem. This alternative syntax is called a lookahead. A lookahead means that a regular expression will look ahead of the current position. In the line above, it means that we're looking ahead for the first slash. If it finds one, it matches that character and skips the rest of the regular expression, which would include the next two slashes. To use this lookahead, we need

to use a pipe (|) between the regular expression and the part that will look ahead. Notice that the regular expression starts by looking ahead at the beginning of the line. The second pipe is also a lookahead that is followed by the regular expression. The regular expression matches the character immediately to the right of the pipe, and skips the remainder of the line. The regular expression then looks for a line end and stops. The original regexp pattern was simple. It was a literal line end. Now we

WhatsNew The Angel of Death has ravaged a generation of police cadets. Now that you have obtained your badge, it is your duty to take revenge. Rediscover The Fierce Nine, the elite group of police officers who put up a fight and put the evil in evil man. An Anonymous note left for you on your desk reads: "The last thing an officer needs is a rookie partner. Good luck." An anonymous person has hacked into the "A3D Private Security" website and left you an offer: "If you help me, we'll cut the whole thing off and never come back. " Whoever you are, you are going to regret opening that email." That text came to you after you logged into the Public Access Point. Suspecting an attack on your computer, you quickly check for viruses. Unfortunately, you are infected with a bad virus. A powerful virus is threatening

your computer. You need to take immediate action. You need the newest version of CRACKERMAN; it can help you with this attack. You need to fix the cracker you have just installed. You are on the hunt for the greatest PCI cracker ever! You are going to download and install ANAKNA. You only have a limited amount of money. So be careful to not spend too much. You want to know how to upgrade your "Ink" cartridges. You have no idea how to do it. You need to install the latest version of the Cygwin bash shell. You want to learn how to check for updates. But, the guides you're reading aren't working. You need to find the latest information about the "Indira Gandhi National Centre for the Arts". After a quick and easy installation, you need to repair your IGS. You want to know how to upgrade the "Micron USA" USB card reader. You need it to work. You are looking for the new version of the "Phone Jack". You need to answer your incoming calls. But, you have no clue how to answer calls. You are trying to protect your computer from new

viruses. You want to make sure your computer is safe. How can you protect your computer from viruses? You need antivirus software. You need to change your PC to a Greek layout. You need to learn how to change your browser. Do not hesitate! You want to enhance your browsing experience with this browser. Do not
