When one thinks of Photoshop, one of the images that comes to mind is the ambiguous golden ratio that appears when pieces of the regular tessellation pattern are removed from a side-view of a golden rectangle.[i] As if in retaliation, the program was designed with a similar golden ratio as the default help style in an attempt to remind users to be artistic and look at images differently. In the same way that the golden ratio is the subject of debate, there are many sources that describe Photoshop as either geometric, psychological, or chaotic. Today, we are going to take a look at these claims from three different domains, and try and come to a consensus on whether or not Photoshop is geometric, psychological, or chaotic. 1. Geometric This is the first and most widely-used explanation of Photoshop, and it comes from the field of mathematics. In mathematical terms, Photoshop is said to be geometric because: it uses rectangular rulers to define position it uses regular shapes to define size images in Photoshop are comprised of pixels, which are often described as being similar to regular shapes in the real world (i.e., shapes). The logic behind this explanation is that Photoshop manipulates pixels, and pixels are close to regular shapes that define the real world. This means that Photoshop cannot be natural since it is generated by an unnatural and alien force. Since images are defined by pixels that represent real objects, Photoshop does not make sense, and users have been trying to figure it out all this time to no avail. 2. Psychological The second argument comes from a fields of psychology and neurolinguistics. These fields describe the creation of human perception from nerve cells that are similar to images in Photoshop. The reason this point of view gives Photoshop a psychological explanation is that there is a "mind" that exists and takes the form of images. It is from these "minds" that Photoshop is created and it would be impossible for Photoshop to exist without this mind.[ii] These images are said to be psychological because they are created by human minds, who cannot "create" Photoshop by themselves. This is a more straightforward explanation of Photoshop than the geometric one, but it is just as flawed. The problem with this point of view is that it has no place for the idea of Photoshop being "optimal," since the question of why we should use Photoshop at all is never answered.

Outrage as Smaug takes over London during NYE Grammy-nominated British composer and orchestra leader Gareth Dunlop wasn't expecting to become the target of a medieval-themed weekend event. He was, however, about to witness a troll invasion of New York during New Year's Eve celebrations — only to have his own play plagiarised by the Bollywood blockbuster "The Hobbit" and his musical dedication even spoofed in the film itself. Mr Dunlop, who performed at New York's Tarragon Ballroom with the New York Virtuosi Orchestra, had been called upon to make arrangements for the traditional New Year's Eve Singers event when he came to the attention of "The Hobbit" team. With most of the world fixed on the eastern seaboard to see in the New Year, the team sought out the New York Virtuosi Orchestra, a 70-piece orchestra and choir that has performed at some of the world's most prestigious venues. "It seemed to me that a mini-New Year's Eve Singers was in order to ring in the New Year in style," said Mr Dunlop. "The Hobbit" is based on the then-fictional novel of the same name and as well as taking inspiration from "Lord of the Rings", it also draws on the 19th century poem "The Rime of the Ancient Mariner" and the song, "Auld Lang Syne". "They play the nursery rhyme, which is super cute, but they also write their own soundtrack music, which I don't think many of the people attending knew," said Mr Dunlop. However, it was their own soundtrack to the film that proved particularly popular, with at least four versions of "Loved the Wrong Hobbit" being performed by the band. A rendition of "Auld Lang Syne" was also sung by the orchestra. Bollywood phenomenon: The film has become one of the biggest blockbusters of 2013, grossing \$1,918,000 in its first weekend of cinema release to become the 12th highest-grossing film of all time. In the musical tribute, Mr Dunlop and the orchestra performed pieces from "The Hobbit" soundtrack to songs, featuring the famous Bollywood vocalist Lata Mangeshkar. "They thought it was funny because the piece
