In FIFA Ultimate Team, gamers can purchase and use movements, tackles, aerial duels and on-ball actions from real-life players in Career Mode, allowing them to see and feel the difference the HyperMotion technology can make to their team play. There are seven different styles of dribbling available, each one with their own degree of difficulty, ball control and speed, depending on the way you dribble the ball. The unique player animation system, called AI CAM, enables players on the pitch to complete natural movements, think independently and to move their artificial intelligence, which is up to three times more powerful than the CPU models of previous FIFA games. The AI CAM allows animators to create a wide range of character styles, based on the player's influence. For example, a speed player will show high intensity and pace, while a powerful player will have a long stride and be quick and agile on the ball. The level of detail and natural movements of the player's AI in real-time environments like career matches, tournaments and Ultimate Team now results in players having an added dimension that gamers can utilise to create effective strategies. The all-new first-time passing has been refined and offers the most realistic approach to passing, aiming to ensure players achieve a better pass and have more control over the ball in important situations. Players can now use a wider variety of different cues to control their passes – speed, power and position – and the wider passing options mean that passing success has never been so rewarding. FIFA Ultimate Team features more than 350 authentic player and real-world player attributes and a diverse range of cards, which are unlockable and will become more powerful over time, together with the equivalent FUT Points that you earn with in-game actions.
