Any idea why this might be? Common Thoughts: 1. Three-dimensional micro-tomographic analysis of the temporomandibular joint in anorexia nervosa patients. Patients with anorexia nervosa (AN) are at increased risk of temporomandibular joint (TMJ) disorders due to the complex adaptations of the soft tissues to starvation. These may cause compensatory changes in the joint surfaces and articular eminences to adapt the pathological process to prevent the damaging of the articular congruency and its cascading effects. This study aims to analyze the depth of the articular eminences and outline the position of the mandibular condyles in the joint space. We hypothesized that the exposure of the retromandibular joint and eminences compromises joint congruency and may explain the onset of temporomandibular pain in patients with AN. Forty-four patients with AN and 34 women with overweight were examined with a 3-dimensional (3D) micro-CT. Measurements of the articular eminences and area of the joint space were taken. We also examined 41 patients with TMJ dysfunction and 21 women with overweight. We found that both AN and overweight patients had altered mandibular shape and increased joint space area (p Description The RAZR™ 4G LTE has an 8.5-inch multi-touch display with a fast processor and a huge 4,100 mAh battery that recharges in just under
