The scope of AutoCAD goes beyond the typical design, drafting and technical drawing functions associated with traditional CAD. AutoCAD also provides non-traditional functions, such as blueprint production, architectural design and drafting, the design of mechanical parts, GIS-based design, and reverse engineering. Autodesk was founded in 1968 by Bruce Hoadley, who was the first employee and the company's first president. Autodesk started out designing drafting software for the aerospace industry and as of 2013 the company was the world's second largest supplier of digital design software, after Dassault Systemes. As of 2013, the company employed 3,100 people worldwide and had approximately 3,300 employees in the United States. Autodesk developed its first CAD application for the Apple II family of computers. Released in 1977, AutoCAD was the first CAD program to run on desktop microcomputers. The 2.5-hour battery life of the Apple II made it an ideal platform for CAD. During the 1970s, most other CAD programs ran on mainframe computers or minicomputers. These computers were expensive and required skilled operators. Autodesk introduced AutoCAD in December 1982 as a desktop CAD app for the Apple II family of computers. At the time, the company had already developed drawing and drafting software for industry and engineering firms. In addition to running on desktop microcomputers, AutoCAD would later be released for the PC, Apple Macintosh, DOS and Unix platforms. AutoCAD's first release included the following drawing features: 2D drawing, which could include construction lines and 2D dimensions camera angles and text notes, to annotate drawings direct editing of line width and length, to quickly draw guidelines and arcs drafting layers, which enabled different layers of the drawing to be annotated with different color and types of lines interactive view changes simple text editing simple selection 2D dimensioning, which provided the ability to create 2D linear measurements on a drawing 2D dimensions with lengths and angles Perspective view 2D perspective views architectural design, which allows the design of architecture-related plans and elevations laser engraving capabilities project management and collaboration features, which included distributed and collaborative editing On the first release of AutoCAD, an estimated 15-20% of

Scripts The scripting language used by AutoCAD is the AutoLISP. It provides powerful programming facilities for automation, especially for object and parameter-based programming. The feature set of AutoLISP is very similar to the Visual Basic language. AutoLISP has two types of function definition: Free-form functions. Function definitions are used to define one-way functions and a complete return statement. Object-oriented functions. Function definitions use a function prototype, which is similar to the C++ prototype. This allows objects to be passed into a function as parameters. An object can also be returned from a function. AutoLISP has an integrated debugger that works with the Step Into, Step Over, Step Out and Stop commands. AutoLISP is an open-source language. The same editors as Visual LISP are available to both authors and users. AutoLISP can be used as a general programming language and also has additional extensions for specific uses. Visual LISP (VL) Visual LISP is an open-source scripting language for AutoCAD developed by Forma Software. Forma-Lite Forma-Lite is a visual LISP (VL) based programming language for engineering. It uses notation inspired by those used in the book Design and Implement Patterns by Gamma et al. which makes it easy for designers to program. Forma-Lite is an alternative to AutoCAD's AutoLISP programming language. Appscript Appscript is an Autodesk Exchange Apps add-on scripting language for AutoCAD. It supports both object-based and parameter-based programming in a text-based language. The developers of the program wanted to make the language as straightforward as possible, so that users could be successful with it in the shortest time. Extension APIs AutoCAD LISP AutoCAD LISP is a C++ API built into the AutoCAD product. It provides a natural interface for AutoCAD scripting languages. Autodesk Exchange Apps The AutoCAD Exchange Apps extension uses object-oriented programming.
