This framework is used to experimentally show that the weak measurement results are conditional on the choice of measurement basis. The implementation of this weak measurement experiment is a combination of superconducting circuit and cavity quantum electrodynamics techniques. The experimental setup allows to accurately determine the measurement operator of a detector by realizing a weak projective measurement on a different apparatus. This work provides a thorough analysis of what type of measurements is possible with weak measurements, a fundamental notion that can be used in various quantum tasks.LOS ANGELES (KABC) -- Multiple people were injured in a stampede that happened at Dodger Stadium on Wednesday night.The stampede broke out during the bottom of the fourth inning of the game between the Dodgers and the San Francisco Giants.Witnesses said the crowd began to push and shove to get closer to the field and to try and get a better view of the players.At that point, the crowd started to head for the exits, but one woman said she realized she was supposed to be in front of the rest of the crowd, so she took off down the middle of the stadium. af5dca3d97
